# BIOLOGICAL SOCIETY OF WASHINGTON 

NEI CRABS FROM THE GULF OF SIAM.*

BY MARY J. RATHBUN.

The forms here described are part of a collection made by Dr. Theodor Mortensen in the Gulf of Siam in 1899-1900. A full report with illustrations will be published in Det Kongelige Danske Videnskabernes Selskabs Skrifter. The type specimens are in the Museum at Copenhagen.

## Family LEUCOSIIDA.

Subfanily ledcosiind.

## Heteronucia mesanensis sp . nov.

Type.- O, between Koh Mesan and Koh Chuen, 15 fathoms.
Dimensions.-Length, 3.7 mm . ; width, 4.5 mm .
Carapace covered with vesiculous granules, sulglobular, very meven; cardiac and mesogastric regions set off ly a deep groove; branchial region nodulous. On the pterygostomian region a large obtuse-angled prominence in line with the eye. Front and orbits nearly one-half as wide as carapace; front with a median furrow and faintly bidentate. Onter maxilliped bent almost at a right angle near its middle. Chelipeds knobby, palm rery thick proximally, as long as fingers which are evenly denticulate and overlap, dactylus lying within pollex.

Cryptocnemus mortenseni sp. nov.
Type.- $0^{7}$, Kolı Chuen, 30 fathoms, shell bottom.
Dimensions.-Length, 3 mm .; width, 3.8 mm .
Near C. pentagonus Stimpson. Margin of posterior half of carapace regularly arched; of anterior half slightly angled at hepatic region; edge of front arcuate. Carapace surrounded by a thin striated rim, widest at postero-lateral region, and continned downward to anterior margin of buccal cavity, forming lower margin of a facet, of which upper edge is blunt. Chelipeds with striated marginal crests; palm $1 \frac{1}{4}$ times as long as wide; immovable finger broadly triangular, sharp-pointed; dactylus strongly bent down.

[^0]l6-Proc. Biol. Soc. Wash., Vol. XXII, 1909.

## Philyra olivacea sp. nov.

Type.- $\sigma^{7}$, coast of Lem Ngob, in seine.
Dimensions.-Length, 9 mm . width, 7.8 mm .
Carapace elongate oval, hepatic facet well defined; elevated portions gramulate ; from the postero-lateral margin 2 oblique lines run inward and converge, forming a small triangular area. Front subtruncate, a slight median point; end of maxillipeds visible from above. Eyes long, slender. Strong tooth on lower hepatic margin. Lateral margins of carapace bi-angular. Posterior margin trilobate. Chelipeds granulous, hand $2 / 3$ as wide as long, outer edge straight, imer convex; dactylus $\frac{1}{4}$ longer than onter edge of palm. Third, fourth and fifth segments of aldomen fused, penultimate segment unarmed, wider than terminal half of preceding segment.

## Subfayily ILIIN_E.

## Arcania siamensis sp. nov.

Type.- + , Sound at Koh Chang, 3-5 fathoms, soft clay.
Dimensions.-Length with spine, 17.5 mm .; without spine, 15.7 mm .; width with spines, 24.5 mm . ; without spines, 15.5 mm .

Near A. septemspinosa (Fabricins); carapace more globnlar, branchial regions more swollen; surface densely covered with gramules visible to naked eye; marginal spines shorter, the long lateral spine less than $1 / 3$ width of carapace.

## Faminy HYMENOsOMIDE. <br> Rhynchoplax coralicola sp, nov.

Type.- 0 , Singapore, on coral reef.
Dimensions.-Length, 2.2 mm ; exclusive of rostrum, 1.8 mm ; wilth, 1.7 mm .

Shell thin, apotted with fine black dots, sparingly hairy, ovate, hordered by a raised rim ; only one lateral spine, situated on antero-lateral margin. Rostrun, a long median and two short lateral spines. Chelipeds marmed, fingers as long as palm. Dactyli of legs spinulous.

> Famiay OCYPODIDAE.
> STBFAMIY MACROPIHTHALMINE.

Cleistostoma lingulatum sp. nov.
Type. - o , Lem Ngol, in mangrove swamp.
Dimensions.-Length, 3.1 mm ; width, 4.5 mm. ; width of front, 1.3 mm .

Surface setose, setie retaining mud, granules forming clumps and thickened lines on elevated parts. Front almost vertical, with 2 transverse, oval, concave surfaces. Tpper border of orbit very oblique. Median tooth of epistome long and lingulate. Exognath concealed; merns of endognath very narrow anteriorly and with a deep outer sulcus. Legs subeylindrical, with one or two tubereles on their anterior margin.

## Family (iRAPSID.E. <br> SUBFAMILY VARCNIN,E.

Camptandrium paludicola s]. nor.
Type.- ㅇ, mangrove swamp, Lem Ngob.
Dimensions.-Length, 4.3 mm . ; width, 5.3 mm .
Surface meven, regions omamented with a few tubercles regularly placed. Width of front $1 / 3$ greatest width of carapace. Three large antero-lateral teeth, and a minute tooth behind the last. Chelipeds subcylindrical, subterminal spine on arm. Fingers as long as palm, broadly hollowed at tips. Merus joints of legs dilated, a triangular spine on distal third of anterior border.

Acmæopleura rotunda sp. nov.
Type.- $0^{7}$, south of Koh Kut, $17-20$ fathoms, mud.
Dimensions.-Length 2 mm . ; wilth 1.75 mm . ; fronto-orbital width, 1.7 mm . ; width of front, 0.7 mm .

Carapace subcircular, widest at middle; front bilobed; eyes stout, filling orbits. Maxillipeds not gaping, merus and ischium subequal to each other in length and width, but much wider than long; exognath narrow. Legs narrow, unarmed, dactyli very slender, moderately curved.

## Stbfamily segarmine. <br> Sesarma (Chiromantes) siamense sp. nov.

Type.- ㅇ, Koh Kut, stony coast.
Dimensions.-Length, 8.5 mm .; anterior width, 9.5 mm ; posterior width, 9.7 mm . ; width of front, 5.1 mm .

Lateral tooth slight, obtuse-angled. Middle pair of superior lobes of front distinctly wider than onter pair. A slight obtusangular expansion on anterior margin of arm. Palm striated on upper surface, 2 striæ sharply marked, 5 or 6 spinnles on upper edge of dactylus on proximal $\frac{3}{5}$. A sharp subdistal spine on merns-joints of legs, last three joints sparsely furnished with long fine hairs.

## Fimily loln otheride. <br> Subfamily piñotherine. <br> Pinnotheres bürgeri sp. nov.

Type.- + , Koh Kram, 30 fathoms.
Dimensions.-Length, 2 mm . ; width, 2 mm .
Near P. gracilis Bürger. Carapace nearly circular, front little advanced, orbits cut out of margin, eyes mpigmented. Chelipeds with fower margin of proporlus concave below distal end of palm; fingers tapering pretty regularly to the strongly curved tips; a slight basal prominence on each finger.

## Pinnotheres lanensis sp. nov.

Type.- , Koh Lan, 30 fathoms, mud.
Dimensions.-Length, 2.4 mm .; width, 2.7 mm .
Allied to $P$. parvulus Stimpson. Carapace very thin, with an antero-
lateral angle. Orbits invisible from above; eyes pigmented. Last two segments of endognath mitten-shaped, dactylus small, attached half-way back on propodus, and reaching its terminal fifth. Chelipeds stout, palm widening distally, pollex wider at base than dactylus. Legs, third longest, second next, first and fourth subequal ; dactyli of third and fourth pairs longest, equal.

Pinnotheres quadratus sp. nov.
Type.- , Koh Chang, one fathom, coral.
Dimensions.-Length, 5.2 mm . ; breadth, 5.3 mm .
Near P. palaensis Bürger. Carapace subquadrate, with rounded corners. Orbits ventral, eyes pigmented. Propodus of maxilliped large, spatulate, overreaching inner angle of merns; dactylus small, linear, scarcely visible when maxillipeds are folded in place. Cheliped stout, widening distally, more than twice as long as high, and twice as long as fingers; a large tooth near base of dactylus fits between two smaller teeth on pollex. Legs, third longest, fourth next, second next; third and fourth dactyli longest, subequal, first and second subequal.

Pinnotheres nigrans sp. nov.
Type.- ㅇ, Koh Lan.
Dimensions.-Length, 6.8 mm .; width, 8.3 mm .
Allied to $P$. latus Bürger. Carapace very high in the middle; anterior margin advanced at middle; orbits invisible in dorsal view; corneæ black. Dactylus of endognath does not reach end of propodus, which tapers toward the end. Cheliped not much stonter than legs, palm widest at distal end, margins nearly straight, $11 / 2$ times as long as fingers. Legs nearly of a length, third longest, second and fourth next, subequal ; dactyli of third and fourth pairs longest, equal, twice as long as the others.

Pinnotheres kamensis sp. nov.
Type.- $\sigma^{7}$, west of Koh Kam, 5 fathoms.
Dimensions.-Length, 1.4 mm .; width, 1.5 mm .
Carapace ovate, an antero-lateral angle; surface coarsely punctate; front strongly advanced, bilobed; eyes large, orbits in margin of carapace; cornere black. Inner margin of merus of entognath angled; propodus long and narrow ; dactylus inserted behind middle of propodus, and not reaching end of same. Chelipeds short and stout, fingers gaping widely. Legs broad, first 3 pairs subequal, last pair smaller; same is true of the strongly curved dactyli.

Pinnotheres kutensis sp. nov.
Type.- $\sigma^{7}$, south of Koh Kut, 17-20 fathoms, mud.
Dimensions.-Length, 1.1 mm .; width, 1.02 mm .
Carapace oblong-hexagonal, tramsparent; front adranced, subtruncate, eyes large, projecting beyond carapace. Palpus of endognath reaches a little beyond angle of merus; propodus short, broad, with dactylus articulating near its middle and overreaching it. Hands inflated, fingers slender, gaping. Legs, second longest, third next, first next; dactyli, fourth shortest, others subequal.

Pinnotheres siamensis sp. nov.
Type.- $\sigma^{7}$, sonth of Koh Kut, 17-20 fathoms, mud.
Dimensions.-Length, 1.1 mm . Width, 1.05 mm .
Near $P$. kutensis. Carapace more strongly angled behind orbit, surface deeply punctate; front plainly bilohed. Propodus of endognath very elongate, dactylus attached on distal hali of propodus not far from middle, and reaching end of propolus. Sternem hollowed out in a circular depression in which lies the end of the abdomen. Palms much swollen. Carpal and propodal segments of legs widened in distal half; dactyli subequal.

## subfamia PinNothereline.

## Mortensenella gen. nov.

Dorsal aspect of Pinnixa. Maxillipeds filling buceal cavity, ischiummerus broad, longitudinal, the two segments subequal, sulbqualrate, fused, but with a faint suture line; palpus small, attached near onter angle of merts, three segments end to enth. Exognath exposed and of goorl size.

Type and only species,

## Mortensenella forceps sp. nov.

Type.- $\sigma^{7}$, Koh Chang, outside mangroves.
Dimensions.-Length, 4.2 mm . ; wilth, 6.8 mm . ; fronto-orbital width, 2.8 mm . ; elge of front, 1.3 mm . ; posterior 1 nargin, 4.6 mm .

Elge of front straight ; lateral angles of carapace rounded; lateral margins cremulate, with closed fissures. Cheliperts equal; fingers strongly curved a way from each other, making a wide gap; a truncate tooth at middle of dactylus. Abdomen narrow-triangular, fifth segment constricted at middle; appendages of first segment would exceed abdomen if extended, but they are hent sharply hackwarl opposite posterior margin of first sternal segment, their extremities lonadly oval.

## SUBFAMILY ASTHENOMNATHIN.E.

## Asthenognathus hexagonum sp. nov.

Type.- $\circ$, north of Koh Kong, s fathoms, mud.
Dimensions.-Length, 5.6 mm . ; wilth, 7.8 mm . ; fronto-orbital width, 4.8 mm . ; width of lower ellge of front, 1.7 mm .

Carapace strongly hexagonal. Front adranced, edge straight, sides oblique. Second leg longest, about twice as long as carapace, and only slightly longer than third leg; first much smalier; fourth most feeble, reaching little beyond merus of preceding pair.

> Family GONOPLACID.E.
> stbfamiy carcinoplacin.e.

## Litocheira cristata sp. nor.

Type.-o, two miles south of Koh Tutu, 10 fathoms, sandy mud, shells.

Dimensions.-Length, 5.5 mm . ; width, 7.7 mm . ; fronto-orbital width, 5 mm . frontal width, 2.8 mm .

Anterior border of carapace, chelipeds and legs fringed with long hair. Four lateral teeth, of which the third is triangular ant prominent. Arm with a thin crest above, forming a tooth near end of segment; wrist eroded; fingers long, cylindrieal. Legs with a thin smootl cerest on merus, anterior in first three pairs, posterior in fonth pair.

## Slbfamily RHIZOPIN.E.

Megasthesius* gen. nov.
Allied to Camatopsis Alcock. Eses unpigmented; movable part of antemmles immensely stont; buccal cavern anteriorly narrowed and arenate, onter maxillipeds closing the cavity; iechingnath as broad as long and broader than merognath, which is subtriangular and bears the palp' at its summit; exognath short and narrow.

Type and only species,
Megæsthesius sagedæ sp. nov.
Type.- ${ }^{\text {T}}$, Singapore, $2-3$ fathoms.
Dimensions.-Length, 2.7 mm . ; width, 2.7 mm . ; frontal-orbital wirlth, 1.8 mm . ; willth of front, 0.6 mm .

Carapace pentagonal; postero-lateral borders long, parallel ; anterolateral borders short, in line with orbits; front biloberl, lobes arcuate. Antenne slender, crowded by the antennules away from the front. Chelipeds shorter than legs; palm spinulons below; fingers cylindrical, longer than palm. Legs long, narrow, margins spinulons. Thiril to fifth segments of abrlomen fused.

Slbfamily typilocarcinopsine nov.
Characters of

## Typhlocarcinops gen. nov.

Differs from Typhlocarcimes Stimpon chiefly in having the first segment of the male abdomen very broad, covering the whole width of the stermm, and transersely grooved. Remainder of abolomen narmw.

Type and only species,
Typhlocarcinops canaliculata sp. nov.
Typr. - $0^{7}$, between Koh Mesan and Cap Liant, in- 8 fathoms, sand, stones.

Dimensions.-Length, 2.7 mm ; width, 3.6 mm . ; fronto-orlital width, 2 mm . frontal width, 0.9 mm .
('arapace widest posteriorly, lateral margins granulate, entire. Front widening anteriorly, strongly deflexal, lower margin arenate and faintly emarginate. Orhits circular, eyes slightly pigmented. Buceal cavity with sides parallel; antero-external angle of merognath not produced. Chelipeds about $1 \frac{1}{2}$ times as long as carapace; second and third legs sub)equal, second longest.

[^1]
## Subfamly HEXAPODIN.E.

Thaumastoplax orientalis sp. nov.
Type.- $\sigma^{7}$, north of Koh Kut, 10 fathoms.
Dimensions.-Length, 9 mm . ; width, 12.6 mm . ; width across front and orbits, 5 mm . greatest width of front, 2.8 mm .
('arapace longitudinally very convex, transversely very level; lateral borders marked by a raised line; antero-lateral margin angularly arcuate, postero-lateral margins subparallel; posterior margin convex. Front poiterionly constricted, anterior margin concave, a slallow median tonth. Epistome obsolete in the middle. Propodus of endognath as wide as long. Chelipeds short, stout. Second leg much larger than first and third which are subequal. Third and fourth segments of abdomen finsed, also fifth and sixth; appendages of first segment much longer than the abdomen, but donbly recurved, forming together a figure 8 .

Thaumastoplax chuenensis :p. nov.
Type.- ${ }^{\text {Th }}$, Koh Chuen, 30 fathoms, shell bottom.
Dimensions.-Lengtlı, 3.6 mm . width, 4.8 mm. ; width across front and orhits, 2.5 mm ; greatest width of front, 1.5 mm .

Differs from the preceding in narrower carapace, gastric region sharply outlinerl; antero-lateral margin less angled, fronto-orbital distance greater, front wider, epistome complete, legs narrower.

## Lambdophallus anfractus sp. nov.

Type.- ${ }^{\text {T}}$, off Koh Knt, 6 fathoms.
Dimensions.-Lengtli, 4.7 mm ; willth, 7.3 mm .
Carapace suloqualrilateral; anterior angles rounled; convex in both directions. Front nearly rertical, subtrmeate. Orbits oblong-oval. Eyes almost immovable, pignented. Buccal cavity narrows anteriorly; imner margin of ischium-merus so convex that the space between ischinmjoints is nearly filled by the palpi. First segment of sternmm with a transwers sinuous trench for the projecting extremities of the abdominal appendages. Third to fifth segments of abdomen completely fused, sixth regment nearly as long as wide, seventh segment subtriangular with conrex sides.

## Family XANTHID.E.

## Slbfamily Menippin.e.

## Pilumnus borradailei sp. nov.

Type.- ${ }^{\text {or }}$, Koh Chang, 1 fathom, coral.
Dimensions.-Length, 7.4 mm . ; width, 10 mm . ; fronto-orbital widtl, 7.1 mm . ; wilth of front, 3.5 mm .

Carapace flattened; a fringe of long hairs on anterior border; anterolateral regions a little granular. Lobes of front very oblique, convex. superior orbital fisures small, outer notch broal. Four antero-lateral lobes, gradually diminishing in size. Palms covered with pearly granules; only distal half of fingers is dark colored. Nearest to $P$. pilosus Fulton and Grant.

## Actumnus changensis sp. nov.

Type.- ㅇ, Koh Chang, 1 fathom, coral.
Dimensions.-Length, 3.8 mm . ; width, 5.7 mm .
Near A. tomentosus IMana. Frontal and antero-lateral regions dotted with separated granules; an indistinct line of granules curves inward and forward from the last lateral tonth. Surface almost bare, with oceasional hairs which do not disguise the markings. First antero-lateral tooth truncate, second and third acute; postero-lateral margins straight. ('helipeds rery mequal, granules small, head-like, dense on falms; larger pollex short, with four large teeth.

Heteropanope sexangula sp. nov.
Type.- , Gulf of siam, exact locality not given.
Dimensions.-Length, 5.2 mm ; wilth, 7 mm .
Form of $H$. eucratudes stimpson; hexagonal ; surface meven, a transverse ridge on each frontal and protogastric lobe and a few nodules on branchial region. Front strongly deflexed, quadrilobate; four anterolateral teeth, fourth largest, acnte, third minnte. Chelipeds unequal; merns with a sulterminal spine, wrist nodular, palns granulose except on distal purtion of larger one. Legs slemer.

## New Names applied to Kxown Spectes.

Uca manii, nom. nov. for Gelusimus urutus de Man, Alcock, not G. acutus Stimpson, which is synonymons with U. dussumieri (Milne Edwards).

Pinnotheres alcocki, nom. nov. for P. parmlus de Man, Bürger and Alcock, not $P$. purrulus Stimpson.

Hypocolpus haanii, nom. nov. for Hypocolpus granulatus (de Haan) $=$ Cancer (Xantho) gromulatus de Haan, 18:37, not Cancer granulatus Limmens, 1758.

Portunus (Lupocycloporus) innominatus, nom. nov. for Neptımus. (Lupocycloports) gracilimames Aleock, not stimpson.
